

Building tomorrow's minds : On the shoulders of teaching giants in the bush capital

Sarah is an experienced, dedicated, inspiring and amazing teacher of Biology and Human Biology. Sarah also co-designed and co-ordinates a large scale extra- curricular STEM/Health "Health, Medical and Applied Sciences" program at UCSSC Lake Ginninderra.

Sarah places students at the centre of their learning. She brings Biology and Human Biology literally alive.

Sarah encourages collaboration and peer-based learning, and provides hands on, real world opportunities and connections to community for students such as excursions, incursions, guest speakers, visits to universities and industry.

Sarah's classes buzz with activity, discussion, learning, discovery, and fun. Sarah has in depth subject knowledge, creativity and passion for science.

Both through her teaching and extra-curricular activities, including the Health and Medical and Applied Sciences (HMAS) program - she promotes the sciences, careers in science, and connects students to learning and pathways beyond college.

The program includes visits and input from paraprofessionals, doctors, veterinarians, physiotherapists, dietitians, pathologists to name just a few, and students get to visit hospitals, zoos, relevant institutions, laboratories and workplaces. For example, adventures to Dubbo Zoo, scientific/medical institutions, incorporation of studies of Indigenous flora and fauna, pathology excursions, links and trips to ANU, the University of Canberra, even animal/aquatic life, in and around, the school in Lake Ginninderra - provide experiences and scope beyond the classroom.
